

EnergyNotes

A QUARTERLY PUBLICATION
FOR YOUR BUSINESS

The new FPL mobile app is here

Now you can see how much energy your business is using, view or pay your bill, report or check on the status of an outage, and even get ahead with the new projected bill feature*.

» Download the app

**Some features and functionalities may not be available for all customers.*

Changing the current – it's all about you

Every day we look for ways to change things for the better at FPL. And, we strive to find new ways to keep your business' energy bills low. In keeping with ways to save, we are shifting our monthly publication of Energy Notes to a quarterly basis. But not to worry, we will still provide your business with informative updates and tips to help you save. It just won't be included as part of your monthly bill anymore. Sign up for our email newsletter and receive the same information found in our printed publication — and more.

Visit: » [FPL.com/preferences](https://www.fpl.com/preferences) and select how you'd like to be notified for "Special Updates."

We're always working to keep the lights on – streetlights included

If you notice a problem, please report it at FPL.com/streetlight or by calling **800-4-OUTAGE** (800-468-8243). Please have the following information ready:

- » The location of the streetlight or the 11-digit number on the pole
- » A description of the problem
- » Your contact information (name, address, email address or phone number)

Not all streetlights are maintained by FPL. We'll let you know if your local municipality is responsible for the light.

Also, during sea turtle nesting and hatching season, we intentionally turn off some streetlights to avoid disorienting turtles near the beach.

In compliance with Florida law, we annually publish these procedures so customers and the general public know how to report inoperative or malfunctioning streetlights.

What powers Florida businesses

We use mostly U.S.-produced natural gas and zero-emissions nuclear and solar to generate the energy you use in your business.

Sources of electricity generation for the 12 months that ended on Feb. 28, 2017

See how we compare to the rest of the nation

Major energy sources and percent share of total U.S. electricity generation in 2016

Understanding the science

Power frequency electric and magnetic fields (EMF) are created wherever electricity flows, which includes the wiring in our homes and schools, power lines, and the electrical equipment and devices we use at work and home. Leading U.S. and international scientific organizations, such as the National Cancer Institute and the World Health Organization, have evaluated EMF research. These organizations generally conclude that the overall body of scientific research does not show that exposure to EMF causes or contributes to any type of cancer or any other disease or illness.
