Increase your home's comfort and lower your bill with efficient ceiling insulation

Learn how to protect your home from extreme heat and cold to save electricity and improve indoor air quality.

# Save energy with efficient ceiling insulation

Increase your home's comfort and lower your bill

## Rebates for ceiling insulation

### WAYS TO SAVE

### Earn up to \$190 in rebates when you add insulation.

If your home was built before 1982, you may benefit from adding ceiling insulation in your attic. Homes built after 1982 are required to have insulation with a thermal resistance of R-19. Don't know what type of insulation you have? Don't worry, our Energy Experts can help when you schedule a free Home Energy Survey.

#### How to earn rebates

- » Sign up for a free FPL Home Energy Survey by calling 800-DIAL FPL (800-342-5375) and an Energy Expert will visit your home to determine if you qualify for an insulation rebate
- » If your home qualifies, we will issue you a rebate certificate worth up to \$190
- » To redeem your rebate, a Participating Independent Contractor (PIC)\* must install your new insulation; you can find a PIC at [FPL.com/contractor](http://FPL.com/contractor)
- » The PIC will deduct the rebate amount from your final invoice

#### Requirements to qualify

- » Your home's insulation must have a current R-value of less than R-8 to receive a rebate
- » Each home may qualify for an insulation rebate once every 20 years
- » Provide access to all attic spaces in order for FPL to determine rebate eligibility

Insulation Type	Receive a rebate if you have less than ...
 Blown-in Fiberglass (Pink, yellow, or white with a loose or coarse texture)	3.6 inches
 Batt Fiberglass (Paper-backed blankets with the R-value printed on the blanket)	2.5 inches
 Cellulose (Gray with a fine, soft texture)	2.1 inches

### Tips to seal in savings

- » **Shading keeps heat out and savings in**
  - Awnings work well when sun is high in the sky
- » **Reduce unwanted airflow with weather stripping and caulking**
  - Silicone or siliconized acrylic caulk have the longest life span, work well on most surfaces and will maintain elasticity over time
